

REAR ANTENNA MODULE

Thank you for purchasing the laser/radar antenna which offers enhanced protection from the rear. This unit is similar to the antenna that is mounted in the front of the vehicle except there is no temperature probe.

Mounting guidelines are the same as they were with installing the front antenna. To receive laser signals the antenna must be level and the window of the unit must face down the road behind the vehicle.

Mounting brackets included will provide a variety of mounting options allowing installation in any vehicle.

IMPORTANT: After installation, it is recommended that POP® Mode be turned off.

For complete installation instructions, see the PRO-3700 or PRO-3750 installation manual. The user guide is also available online at **www.whistlergroup.com**.
